SKILLS

- **Programming Languages:** Python, JavaScript, C++, Elm, C, CSS, HTML, Java, SQL, TypeScript, R
- **Technologies:** Flask, Unix, Linux, Windows, BeautifulSoup, YOLO, JSON, Git, pandas, Matplotlib, PyTorch, OpenCV, G-Suite, Microsoft 365, n8n, Stripe, PostHog, Vue, Spring Boot, React, JIRA, Selenium, NumPy
- **Database Systems:** MySQL, PostgreSQL, Supabase
- **Internet Protocols:** HTTP(s), TCP/IP, ARP, FTP, SMTP, DNS, DHCP, CNAME, SSL

EDUCATION

- **McMaster University** September 2023 - April 2027
Computer Science Hamilton, Canada
 - Awards: Dean's List, The Faculty of Engineering Award of Excellence
 - Relevant Coursework: Data Structures And Algorithms

EXPERIENCE

- **Software Engineer Intern** May 2025 - September 2025
MonitorIntent Remote
 - Engineered a Docker-containerized server using Flask, Stripe (payments), PostHog (analytics), and Chatwoot (support) to support concurrent requests from multiple users, averaging over 5,000 fetched leads at a given time.
 - Developed an effective frontend with React, TypeScript and Vite to build core features like the prospects and dashboard page, enabling the sales team to demo a polished and stable MVP that secured a user base of over 30 clients within a few months.
 - Designed a secure CRM integration for HubSpot using n8n, supabase and a UUID system to manage user OAuth tokens while also automating lead synchronization to transfer an average of 10,000 leads to users CRM.
- **Computer Vision Team Member** October 2024 - Present
McMaster RoboMaster Hamilton, Canada
 - Developed real-time object detection and tracking algorithms using PyTorch, OpenCV and YOLO
 - Integrated depth modules with embedded systems, reducing response time by 20%
 - Trained and validated models on custom datasets, improving target identification accuracy by 15%
- **IT Assistant** June 2024 - September 2024
Medallion Corporation Toronto, Canada
 - Maintained over 20 company computers, peripherals and employee accounts
 - Managed over 1000 files while expediting search time and file look up based on details in file using OCR and SQL, improving search efficiency by 75%
 - Automated the categorization and manipulation of files by developing C++ and Python scripts, resulting in a 95% reduction in misfiled documents

PROJECTS

- **BrewChat** July 2024 - August 2024
Tools: [Python (Flask), HTML, Javascript, AI]
 - Developed an interview interpreter that helped users prepare for career coffee chats
 - Implemented a system to save and categorize the recording and pertinent information to a database
 - Created API calls that interface with AssemblyAI to analyze users' interviews and provide key takeaways
- **War Of Pets** February 2024 - April 2024
Tools: Elm
 - Developed a local multiplayer game in Elm, utilizing functional programming to enhance performance
 - Created a custom physics engine for realistic projectile trajectories and engaging object interactions
 - Designed an accessible UI that improves eye-hand coordination with intuitive controls for players with motor skill challenges
