Education

McMaster University

B.A.Sc. Computer Science, CO-OP

Sep 2023 – Apr 2027

Hamilton, Canada

- Relevant Coursework: Data Structures And Algorithms, Databases, Fundamentals of Machine Learning, Computer Networks and Security, Operating Systems

Experience

American Express

Software Engineer Intern

May 2026 – August 2026

Toronto, Canada

- Developing vendor-facing full-stack platforms and backend services on the International Cards and Risk team at American Express using Spring Boot, JavaScript, and Python data pipelines.

Info-Tech Research Group

Software Developer Intern

Jan 2026 – Present

Toronto, Canada

- Authored 20+ SQL-driven migration scripts in Ruby, designing and implementing database schema changes, including new tables, columns, and constraints.
- Architected a full-stack MVC invitation system with PaperTrail auditing, RESTful controllers (CanCanCan auth), and Ransack filtering, enabling full data traceability; wrote 30+ RSpec unit tests for models, controllers, and policies.
- Spearheaded no-reload admin workflows by leveraging Hotwire Turbo and the simple form gem for modal-based inline CRUD, and localizing using I18n across all view components, reducing latency by 70%.

MonitorIntent - B2B Lead Generation SaaS Start Up

Software Engineer Intern

May 2025 – Sep 2025

Remote

- Engineered a Docker-containerized Flask-based API server deployed with Heroku that integrated with Stripe (payments), PostHog (analytics), and Chatwoot (support) to fetch 5,000+ leads at a given time.
- Developed an effective frontend with React, TypeScript, and Vite, enabling the sales team to demo a polished and stable MVP that secured a user base of 30+ clients within a few months.
- Devised a secure CRM integration for HubSpot leveraging n8n, Supabase and a UUID system to manage user OAuth tokens while automating lead synchronization to transfer an average of 10,000+ leads.

Projects

ArtLingo - Computer Vision Artwork Critique System

Tools: [React, HTML5, TypeScript, Node.js, Flask, Python, PostgreSQL, Supabase, Docker, NumPy, SciPy, Pandas, scikit-learn, OpenCV, PyTorch, Keras, Tailwind CSS, Canvas API, JWT, Pillow]

- Designed and built an end-to-end computer vision pipeline that analyzes artwork and produces quality scores and heatmap overlays highlighting regions requiring improvement.
- Developed a multi-annotator data pipeline aggregating artist feedback and generating 100,000+ labeled image patches for supervised CNN training.
- Built real-time image processing metrics with OpenCV, including Canny edge detection (line quality), K-Means color clustering (color harmony), and grayscale percentile analysis (value distribution) with EfficientNet-B0 based CNN.

Skills

- **Programming Languages:** Python, JavaScript/TypeScript, C/C++, Java, SQL, Ruby, R, HTML/CSS
- **Frameworks:** React, Flask, Ruby on Rails, SpringBoot, PyTorch, OpenCV, scikit-learn
- **Tools:** Git, Docker, AWS, Stripe, PostHog, YOLO, JIRA, Unix, Linux, Bash, Scrum, Github Actions, Node.js
- **Databases:** PostgreSQL, MySQL, Supabase
